

ISIS Point of Sales – Overview of the main modules

Which operations of my business can I control with ISIS

Work break is a complete security access module which controls employees signing in and out with passwords and multiple security levels.

Balancing report assists cashiers to balance their till at the end of a shift. This report is optional if company policy does not allow cashiers to have access to specific information.

Shift closure is executed by cashiers when their tills are balanced. This final report indicates the shortage or overage results of their tills.

The **Administration and Maintenance** module allows you to enter or modify products, promotions, taxes and gas prices, related parties information and to manage inventory.

Day closure indicates at the financial institutions / Brokers the time when credit / debit batches are finalized. **Report generator** allows you to view or print sales information for any period and for any product.

Sales operations are all registered under one menu: prepaid and regular gas sales, products sales with or without UPC, products by weight, price overrides, times, refunds and all methods of payment.

The **Drawer activity** module allows cashiers to proceed with drawer withdrawals such as safe drops and supplier paid outs or drawer additions (perceptions) such as various customer bill payments (i.e.: telephone). For management personnel, it is possible to do corrections if an erroneous withdrawal was previously entered by a cashier.

The **Employees schedule** module allows the management personnel to plan their schedules for future weeks. The employee hours worked are captured by scanner. It is possible to assign various tasks to employees and verify if and when they were completed. Time assignment reports and time sheets are available for each employee.

The **Speed key definition** module allows management personnel to select among a library of images representing the non scannable items.

Transfer of information is used to send or receive data from the Head Office Pricebook.

Point of Sales modules – Gas Station

Which features are included in ISIS Point of Sales module?

All ISIS functions for registering gas sales are displayed on one screen. You will notice that the dispensers are always at the top of the screen for easy authorization and verification during the use of various modules.

There is only  touch to register gas. Can it be more simple than this?

- ✓ *Single keystroke for gas authorization.*
- ✓ *Running volume and total sale display for any pump.*
- ✓ *Automatic transaction in waiting generated upon replacing nozzle.*
- ✓ *Unlimited sales stacking for any pump.*
- ✓ *Prepayment accepted with currency limit enforcement.*

- ✓ *Five dynamic calculated tender amounts accelerated transactions.*
- ✓ *Possibility of tracking customer demographics, membership information or loyalty programs.*

the  touch

- ✓ *Voiding/Return a payment returns the transaction to the waiting zone for finalization by another method. Fully integrated credit and debit card processing available.*

Other modules – Administration and maintenance

Which features are included in ISIS Point of Sales module?

ISIS has an administration and maintenance module that includes a full fledged, simple to use price-book which allows authorized personnel to enter or modify product specifications, to change gas prices and tax rates, to create or modify promotions and collect information on all related parties involved in your business.

Here are some features and benefits specific to this module:

- ✔ Support main fuel dispenser as well as fixed or variable blend pumps
- ✔ Allows manual or automatic authorization of pumps and designates full or self-service pumps for specific hours
- ✔ Delay a price change or a promotion for any fuel product or merchandise
- ✔ Promotions can be created that mix fuel and merchandise sales
- ✔ Easy consolidation of debit and credit transactions on the employee balancing report when using the integrated communication link
- ✔ On-line authorization through Direct Dial Bank access (3201 or 3101), SPC or NCR Network is available. Off-line limits for each card and their acceptance can be configured as required
- ✔ Unlimited number of tax types and groupings which can apply to any product or category of products. Tax rates can be changed easily and be effective at a later time.
- ✔ Possibility of tracking membership, demographic or any other customer information which could be used as a database for Direct Marketing

Other modules – Drawer Activity

Which features are included in ISIS Point of Sales module?

ISIS has a drawer activity module which monitors all tender entries or exits from the till which are not the result of a sale transaction. Any activities not registered properly can be corrected by authorized management personnel even after a shift closure.

Here are some features and benefits specific to this module:

- ✔ *Visual symbol appears in the POS module to warn employees when the cash till contains an amount in excess of a programmable set limit.*
- ✔ *All drawer openings can be secured with employee passwords.*
- ✔ *Each drawer activity is subject to a specific security level.*
- ✔ *Possibility to define additional activities to those already available: pay-ins, pay-outs, cash drops, additions to cash float and bank deposits.*
- ✔ *All activities can be finalized using different methods of payment: Cash, Food stamps, Money Order etc.*
- ✔ *A status windows indicates various information pertinent to the till among them the cash amount which should be withdrawn from the till.*
- ✔ *A receipt is printed to certify all activities registered.*
- ✔ *Management personnel can proceed with correction on a till already closed if an activity such as a drop, supplier payment or float addition was not registered properly.*

- ✔ *Any correction registered are recorded on the employee final report as well as on the daily report. Even if a correction is done after the till closure, reports are updated and can be reprinted at any time.*

Other modules – Report Generator

Which features are included in ISIS Point of Sales module?

ISIS has a Report module which is very flexible. The number of reports are unlimited and the types of reports can be configured rapidly. One and all types of transactions can be traced over various periods (employee, till, day, week, month, year) and all product information can be detailed (department, category, sub-category) or summarized by business unit.

Following is a list of the different types of reports available in this module:

- ✔ *Period reports: shift or daily report, weekly, monthly and annual reports, till and employee reports.*
- ✔ *Payment methods: cash, credit, debit, check.*
- ✔ *Transaction types: normal, returns, voids, void-return, cancellations, price override, drive-offs, pump test or 'all types' of transaction.*
- ✔ *Credit cards: transaction including payment by any credit card defined and accepted by the system, with on-line or local authorization can listed in a report.*
- ✔ *Drawer activity: safe drops, float additions, supplier payments.*
- ✔ *Traffic: total sales by hour, product sales for a specific period, product sales by hours, sales correlation by department, sales correlation by product.*
- ✔ *Inventory: price list, inventory quantities, product for re-order.*
- ✔ *Gas: gas sales by pump, gas pump readings, gas prices, gas inventory.*
- ✔ *Merchandise: profit margins, promotion profit margins, department, category and subcategory sales summary, selected department and product sales, low sales product and high sales products.*
- ✔ *Members: member sales, sales by member, sales for all members by number and by name.*
